

CAPABILITIES STATEMENT

Company Overview

OneSpring, LLC has been a leader in the requirements definition and management discipline since 2005 and has worked on more than 150 projects in the areas of business analysis, process improvement, software visualization and training. Our experience has given us the opportunity to work with over 40 clients using numerous methodologies such as Rational Unified Process (RUP), Contextual Design, Agile SCRUM, Waterfall, and many other custom processes. We have also pioneered and successfully implemented new methodologies such as **Previsualization, Stream and Agile Requirements Definition and Management (RDM)** at dozens of companies. Our approach to requirements definition enhances currently practiced software development methodologies by eliminating ambiguity, increasing stakeholder clarity, and streamlining artifact delivery.

Our goal is to help clients “define the right requirements the first time” by more effectively capturing, managing, and delivering software requirements. Our approach combines real-time elicitation techniques and best practices with leading edge technology to produce significant productivity gains for our clients. ***This combination has proven to accelerate software delivery by at least 30% and reduce defects by up to 50% or more.***
